☒ Further documents are listed in the continuation of Box C.

☐ See patent family annex.

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier document but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

DERWENT-ACC-NO: 1999-458184

COPYRIGHT 1999 DERWENT INFORMATION LTD

TITLE: Production of electrolyte for lithium cells, with low water and reduced free acid contents, useful for lithium cells, particularly secondary type

----- KWIC -----

TIX:

Production of electrolyte for lithium cells, with low water and reduced free acid contents, useful for lithium cells, particularly secondary type

ABTX:

NOVELTY - A method for removing water and free acids in an electrolyte for lithium cells comprises heating a solvent of 1 or more organic solvents with not more than 100 ppm water content to vaporize water and solvent while blowing an inert gas into it to lower the water content, and dissolution of a lithium electrolyte at a temperature not more than 20 deg. C.

ABTX:

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for an electrolyte for lithium cells obtained by the method with water content not more than 3 ppm and contents of free acids of not more than 1 ppm, calculated by c n v r s i n

into hydr flu ric acid.

ABTX:

USE - The electrolytes are applicable in the production of lithium cells, particularly the secondary type.

ABTX:

ADVANTAGE - With the electrolytes, it is possible to make lithium cells with less problems of lowering charge and discharge cycle characteristics and corrosion to the cell interior.

TTX:

**PRODUCE ELECTROLYTIC LITHIUM CELL LOW WATER REDUCE
FREE ACID CONTENT USEFUL
LITHIUM CELL SECONDARY TYPE**
